Patched Errors and Broken Objects in GDIplus.dll Local DOS related hacks and tools which are often abused in the early stages of Trojan infections. Since Microsoft Windows 95, malware authors have turned their attention to supporting an end-user community that desires to generate some ad revenue for themselves. Some of them, like Microsoft, offer a free solutions to their customers, while others still aim to maintain a commercial transaction between the final user and themselves. Our team constantly faces the task of evaluating and analyzing a lot of different systems and drivers that may be of interest to our community, while checking their authenticity and reliability, but also their overall security status. There are so many ways to exploit Windows systems and many of them are still waiting for a more detailed analysis. It does not take much to find malicious files, hidden processes or recently hidden files, and once a serious threat is detected, we start to dig deeper to research its nature and get a better understanding of the nature of the threat. In this specific case, we examined a process called "svchost.exe". When we found a suspicious driver, we decided to include its name in our scans and the results were just terrifying. GDIplus.dll and svchost.exe It is not surprising, that our first examination turned up the GDIplus.dll. This is an open source library, which delivers the GDI plus (Graphics Device Interface) toolkit for advanced user32.dll based applications. It basically provides a common interface and functionality between applications and the Windows graphics system. Some of the more detailed information about the GDIplus.dll file is available on the Internet. The graphic below shows the architecture of the file. After reading the file description, we deduced that our target is a corrupted version of svchost.exe, which may be used to execute a hidden malicious program. We started our research, as we usually do, by activating a specific signature, which indicated that the target is already compromised. After receiving the results, we decided to continue our search, analyzing the latest samples from the Dradis threat intel database. Some of the important
