Designed with the Electron framework, Vue.js and a bunch of other tools, this is a simple calculator that features only standard mathematical operations. Requiring no installation, it can be launched as soon as you download and double-click the.exe file. Because of this, you can keep it stored in your collection of portable software and run it whenever you want to use a calculator. Sophisticated calculator for standard math operations The calculator has a sleek and sophisticated appearance thanks to the dark theme which is ideal when using the program during the night. However, you can switch to light mode after heading over to the settings panel, if this is more convenient for you. As previously mentioned, only basic math operations can be made with Vue Calc, like additions, subtractions, multiplications and divisions. You can also use the percent operator and plus-minus sign for positive and negative values, clear the most recent entry with CE, and enter decimals. Input commands with the mouse or keyboard To send commands to the calculator, you can either click the buttons with your mouse or press keys on your keyboard. Numpad is supported. Besides toggling light and dark mode in the settings area, you can change the calculator

## Vue Calc Crack + License Keygen

Does not require any installation. can be run directly from your hard disk Perfect for adding, subtracting, multiplying, and dividing numbers No double precision support, only standard math operations Only supports input through keyboard keys and mouse clicks All operations are always displayed in the same format More readable when displayed in dark mode Supports Italian, French and British English input Resizes the app window to any dimension (width and height) Uses the left click to operate the calculator Some of the above functions are not available. The GUI in particular works very well: The program looks great thanks to the dark UI. The icon is resized to a smaller size. Toolbar and operating keys are aligned correctly. Keyboard shortcuts can be used for basic operations, and are displayed in the center of the window. Resizing the window The current version of Vue Calc allows users to resize the display to any dimension. To do this, hold Ctrl (Windows) or ⌘ (Mac OS) and hit the space bar to activate the zoom feature. The display is resized to fit perfectly in the current window. While in dark mode, this feature is useful to display more information. Input with the mouse The calculator can be operated with the mouse by clicking buttons and numeric keys. For instance, the 5 in the top-right corner is the division button, the 8 in the top-left corner is the multiplication button, and the 9 is the decimal point. The calculator only works with one single operation at a time, so you cannot use several buttons to perform several operations. The calculated result is the final result of the operation. Using keyboard keys Vue Calc supports keyboard keys to input into the calculator. The total of 104 key shortcuts listed in the settings area are displayed in the center of the app window. It consists of: Enter: Cancels the most recent entry and starts the new one - is the minus sign, the only one that can be modified with the mouse wheel CE: Clears the most recent entry, and displays the starting value =: Determines the value of the expression, followed by the format to display, e.g. 2, 1, 12 or % +: Adds the next number to the current one -: Subtracts the next number from
