Do you often forget your login information, especially when it's required to access programs that usually get launched every day? Even if you create your own short password or keep in mind the secure settings, things can often go wrong and you end up forgetting all those important details. What to do when you have no idea what your login details are? No one is going to help you retrieve them, because they can't access your config file to gain a look. In addition to the password, the program also contains a list of common usernames and passwords. Passwords are prefixed by a W for web, R for torrent sites, F for FTP sites and so on. Some passwords, such as, can be converted into a usable web address, but not all of them. In this case, the program will give a list of similar domains and take the first found into consideration. The JDownloader Password Decryptor Portable will work as a password recovery utility. To find out how to use it is not always obvious. Nevertheless, it is a good idea to look on the download page. This software is easy to install and works perfectly on Windows 10, 8, 7, Vista and XP. It is a bit complex at first but very easy to use. If you want to recover your login information, you will have to do some research and try to memorize the information you saved in the config file. Download and install JDownloader Password

Decryptor Portable from the link below. You can find the latest JDownloader Password Decryptor Portable at Softpedia. When you run the program, it will launch a user interface with a recovery button and a browser field. Click on the browser field to get started. Browse your config file and press the button. If the app detects your data, all you need to do is copy it to your clipboard and find a file to save it on. From here, it is up to you to find your username and password. It does not automatically open a browser and wait for an address to be displayed. The JDownloader Password Decryptor Portable download is valid for Windows 10, 8, 7, Vista and XP.
