AutoCAD is the most widely used commercial CAD software package in the world. In addition to 2D and 3D drafting, AutoCAD can be used for 2D and 3D computer-aided design (CAD), industrial design, and visual communication. Along with its primary function of drafting, AutoCAD has other 2D and 3D tools for creating drawings and viewing them on a computer screen or printer. The AutoCAD 2D and 3D family includes the following major application programs: AutoCAD LT: A free, lightweight (under 40 megabytes) version of AutoCAD. Applications There are two major commercial desktop applications from Autodesk: AutoCAD software (formerly named AutoCAD LT) is a specialized 2D- and 3D-graphics software application designed for the creation, viewing and modification of architectural, mechanical and electrical engineering models. (Basic) AutoCAD Architecture software (formerly named DWG Viewer) is a specialized 2D- and 3D-graphics software application used to display and analyze AutoCAD files. There is also a free version of AutoCAD (AutoCAD R14) available. It is based on the same code base as the Pro version. It is designed for individual use and does not contain most of the professional features. Architectural styles There are two main architectural styles that are used to create architectural drawings. 2D 2D is the standard representation method used in the majority of AutoCAD and AutoCAD LT models. 2D Model Lines A 2D Model Lines drawing consists

of a line segment that has been extruded and bent at an angle so that it is the same height as the surrounding surfaces. The lines appear to be buried in the surface and follow the surface contours. Each line has a color assigned. 2D Model Lines are used in AutoCAD and AutoCAD LT in areas such as: General Building Construction: Edge joins Door & Window Operation: Operation modes General Shop Drawings: Snap and Vertex operation Sections, Elevations, Mouldings, Windows, Doors and Other: Visual Modifier tools A typical 2D Model Lines drawing might be viewed as follows: 2D Model Lines are not found in AutoCAD Architecture. In AutoCAD LT, 2D Model Lines are not supported in the Model window (although they are in older versions of AutoCAD LT). They are supported in LDraw, ArchiCAD, ArchiCAD LT, ArchiCAD 4D, MasterDraw, ArchiCAD PDS, HomeCAD, MasterCAD, DesignCAD, DGN with parameter M/E. 2D Model Lines can be created in AutoCAD by using the Add Profile to Surface (2D Model Line) command or the Create Profile to Surface (2D Model Line) command and the Edit Surface (2D Model Line) or Add Surface (2D Model Line) command a1d647c40b
