Q: Appropriate way to create and manage settings for an app I have an app with around 15 properties that need to be editable. The properties are similar but not the same as the settings found in the Windows OS. So far the app is not in the store but in a private repository. Is it appropriate to create a settings.properties file with just key/value pairs, or should I try to put it in the app? What's the best way to do it? A: Create a Settings.settings file with the same layout as the OS settings (but with different names). Don't link to a.dll or anything; just include the file and read its settings. if you think about it - he's been doing everything to create and remove his own obsesion. he's the one who says 'fuck' the whole "fucking" your gf - it's just you trying to reduce your own living to the lowest common denominator (and yes, i realize that there's plenty of post-modernism about it but still...) the 'y'-ing out has got to be the key factor - it's a 'fuck' that you're taking out, not a 'fucking' that you are taking out.Jeffrey Eisenberg, an actor from Chicago who has starred in "The Avengers," "The Good Wife" and more, has died after a five-month battle with cancer. "Jeff was my husband and my best friend, and he was so much more to so many people than I ever could have expected," Eisenberg's wife, Tracy Vesce, said in a statement. "The outpouring of love and support for him and us since he was diagnosed was inspiring. We are so grateful to everyone who sent their love and prayers. Now Jeff is free from his pain and suffering. He's gone home, where he's at peace." Eisenberg, a graduate of Harvard, was an avid runner who won a pair of Boston Marathons and was a member of the 2007-08 Boston University track and field team.
