More particularly, embodiments of the present invention relate to a technique for resource sharing in transaction processing in a computing environment. Transaction processing is the process of managing the synchronization and integrity of information across a computer system. A transaction involves a collection of actions that are implemented as a single unit of work. For example, a banking transaction such as a deposit or withdrawal of funds involves a collection of actions, such as debit a checking account, add funds to an investment account, transfer a fund from one account to another, and so on. These actions are performed as a single unit of work. In a transaction processing system, a transaction is the only event that may be handled by any particular component of the system. Before allowing a transaction to proceed, the transaction processing system performs a series of checks to verify that the transaction is valid and in conformance with system policy. Classic mode While wearing the R-Type costume, engage in combat in the player-designated "normal" setting to play the classic version of the game. Infinite mode Earn infinite ships by defeating the Bydo by any means necessary. Co-op mode When playing in co-op mode, players can control the player-designated "Slow" and "Fast" characters. Use the special "slow" power-up to increase your ship's speed. You can use the special "fast" power-up to increase your bullet speed. New features: *added reverse direction button. *Greater control over all the game settings. *Use the game back- and forward buttons to set the game's speed. *Up to 8 players can play through the entire game in either of the "slow" and "fast" settings at the same time. *Infinite mode gives players a chance to unlock for each and every mission. Does anyone remember R-Type? It's a game that you played on SEGA Genesis when you were a kid and then suddenly and unexpectedly came back to play again on the Switch. You are the little red R-type hero, and you're on a mission to blast all of the Bydo's hideouts that you can! Once you've set everything up, there's no talking, no instructions, and no instruction manual. You are on a mission to kick some Bydo's butt, and that's exactly what you're going to do. That said, this game does feel like an older, more traditional kind of game in that you have most of the necessary controls right on your control panel. You'll need to fire your machine gun up and down to get in range of the bad guys, and you can do that with the L and R buttons on the panel. You also have to be careful of your hit boxes, because the middle of the screen is useful for that. Basically, this is a shooter where you're not going to be given any kind of guidance, and that's exactly what the game has in store for you. There's nothing better than blasting a haphazard goal in order to give you some much-needed breathing room, and that's exactly what this game is going to do. R-Type Dimensions may be a fairly short game, but it's

Chapter Zero At home I had a few updates for you guys that I've been in the editing phases for. Hopefully, this time next week, we'll have them up for your reading pleasure… Karen's pre-combat thoughts: Scion: Well, I guess the odds are in our favor. I mean, they're laser indents, and they would make it hard for them to escape. I wonder if they will have a similar mechanism in space? Catastrophic error, BTW. Kaya: You were really confident before, fool Karen: Yeah, nothing to worry about. I looked up the term, "rapid-explosion laser decelerator," and it basically describes an improvised small particle laser gun. Basically, they accelerate the tiny fine particles to great velocity, using a special trigger. Could it be as simple as lacing the ground with reflective material? Kaya: No, probably not. Lacing the ground may seem like a simple route, but that's going to cause severe interference with communication, and in this case, it would slow them down. It's not like there is an enemy aircraft grid that can find and exploit any ground laser. They would just focus on that location and it'd be a problem. This thing is specifically designed to manipulate the build-up of kinetic energy. It also has a very precise focusing function. They would completely destroy the soils with the chains. I mean, look at the destructive force, it's like a magnetron… Karen: Kon-bashing, Kaya Kaya: Once again, it's just a figure of speech. I don't hate him… Karen: Ugh. I don't know what's going on here, but I'm going to be having some serious stress problems in combat. Kaya: Nah… Come on, it should be a blast. Focus on the mission, not him. You know, the whole point is to take them out regardless of training, and I guarantee you, Scion, you will destroy them before they get a chance to focus on killing you. Karen: Why, what do you mean? Kaya: That's how I see it. It's my business, that's how
