THE OLD FANTASY ACTION RPG. Combining the best elements from the classic MMORPGs of yesteryear, and the best console experience with a variety of genres, Tarnished is aiming to create a new fantasy action RPG game that will feel pleasant to play even while grinding, and a fun game to actually spend time playing. "Players will be able to customize their characters and enjoy the story, and in addition to that, they can freely roam around the world and enjoy non-linear content." Follow the news of Tarnished on the game's official Facebook at With a strong background in providing MMO services from the 2010's, developer, NgeeNgeeSoft Inc., has announced the open-beta version of Tarnished, a new fantasy action RPG that will be available for free on the Google Play store. Regarding this announcement, the press release stated "We're really excited to be able to announce Tarnished. We've been playing action RPGs on mobile devices since 2010, and after seeing the tremendous demand from fans of classic RPGs around the world, we felt it was our turn to unleash a new fantasy action RPG on players. We're really proud of this project, and we hope that players will enjoy it as much as we do. "The core gameplay of Tarnished is an action RPG where players will be able to create their own character, and while moving around, we'll be introducing a lot of features that will allow players to enjoy a unique and diversified story. Additionally, we have created a MMORPG that has never existed before; players will be able to roam around the open world freely, and with the unique features of the game, we've made the game feel nice to play even while grinding. At the same time, by using the Google Play Games, we've added elements that allow players to connect to each other even while they're playing the game; regardless of how far away they are, players will be able to enjoy their immersion and feel the presence of others. "In terms of graphics, we've created a world and characters that fans will recognize, and for additional immersion, we've implemented numerous elements that will be absolutely amazing as our players continue to wander. In addition, I'm really excited to be able to announce that we'll be releasing a free-to-play version; even when the game is played by free players, we have included all

Features Key:

Weapons and armor increase your physical strength and increase the K.O. effect of attacks.

Increase your physical strength and armor by strengthening your body and equipment with EXP.

Equipment and skills increase the duration and effectiveness of the attacks and skills that they use.

The ability to use special magic skills greatly affects online gameplay. In addition to the standard effect of activating a defense point, magic skills have the effect of increasing monster health, the damage dealt by attacks, and the effect of interrupting recovery.

A variety of armors, weapons and spells can be developed. With the growth of your physical strength as a character, the bonuses of these skills increase, changing the overall gameplay according to your play style.

Different armors are unlocked in battle depending on the skills of the character.

The summoned monster skills, powerful when combined with weapons and armor, become even more influential.

Forging a strong weapons and armor is essential to enhance your numbers of monsters.

Develop a weapon or skill that is suited to a particular monster so that you can make use of the specific skills of the summoned monster.

The importance of buff skills has increased, but they can only be activated under specific conditions. Buff skills have a stronger effect when used during attacks and can damage opponents at the costs of increasing the damage dealt to your own party.

To help you make the most of the most advantageous play, the guiding force of a new system is D.D.

A high D.D. means that your character is highly level-appropriate according to the situation of battle.

- From 10 in light areas to 30 in life-or-death situations.
- The more enemies (including bosses) that you defeat, the more your D.D. will increase.
- The strength and D.D. of monsters are not just set values but also vary based on the number of enemies in the area.

Benevolent and malevolent forces (belief) have an effect in the online environment.

- Belief you may have influenced yourself will also influence online gameplay for the duration of your stay.
- Belief

How about Voltage: Should be 27.6V and current 0.1A? I use a K-type thermocouple to measure the temperature of the exhaust manifold by platinum wires on the bushing, using two thermocouples I could measure 15°C difference in the exhaust manifold of my van (slight intake pulsing). I also have a K-type thermocouple installed in a cigar lighter socket to measure the temperature of the burner pot (using a magnet I can move the socket to get the maximum temperature reading). One thing I wonder is whether the heated catalytic converter (only standard in 1.6T) can cause overheating issues. I always take my van to an auto mechanic before winter starting (9 months left of warranty). Can you contact your mechanic? As for the hard-pipe water is injected to the engine, what do you think? Drain the water? Well, it could help to make an engine run better but do you want to drain water in

Immunoassay diagnosis of group B beta-hemolytic streptococci in the vaginal tract. A double-antibody sandwich immunoassay (DAS) test and three methods based on latex agglutination were compared. A total of 110 pregnant women were tested for group B beta-hemolytic streptococci in the vagina and cervix. The clinical study group was subdivided into five subgroups according to the time of occurrence of the bacterial infection. The DAS test was the most sensitive method (100%) for detecting streptococcal antigen in vaginal swabs, whereas Dacron-test was the most specific (95.9%) and the agglutination latex (83.6%) was the least specific (P less than 0.05). With an infection occurring within the first 24 h, the DAS test showed a sensitivity of 90% and a specificity of 95.7%, and an infection with a greater duration, the DAS test showed a sensitivity of 100% and a specificity of 94.1%. Dacron-test showed a sensitivity of 74.1% and a specificity of 95.3%; agglutination latex showed a sensitivity of 94.5% and a specificity of 95.5%; and the latex-test showed a sensitivity of 71.5% and a specificity of 94.8% (P less than 0.05). There was no significant difference among the three methods, although the DAS test was more sensitive. A. D. Ellis
