IMDBPIC is a lightweight software application whose purpose is to help you download pictures from IMDb database for offline viewing. Portable utility You can take advantage of the tool's portability status and run it on your computer without having to go through installation steps. You only need to open the executable file in order to access its features. Administrative privileges are not required when running the program on a target system. You can store it on USB

flash drives or other devices and uninstall it using a simple deletion task because it doesn't leave entries on the host PC. Clean layout IMDBPIC manages to embed all configuration settings into a single panel without looking crowded and confusing. There's no support for a help manual but the configuration parameters look highly intuitive so you can manage to tweak them on your own. Image downloading options The application offers you the possibility to grab images so you can preview them on your system by specifying a user-

defined URL. You do not need to perform any special tweaks in order to download photos, as the tool requires only the image's link. What's more, IMDBPIC reveals information about the processed picture links directly in the main window and shows details about the number of identified images and pages. Tests have shown that the program carries out the downloading process pretty quickly. It does not eat up a lot of CPU and memory resources, so the overall performance of the computer is not affected. Bottom line All things

considered, IMDBPIC has to offer nothing more than a simplistic approach for helping you get IMDb images. On the downside, the utility has not been updated for a while so you may bump into compatibility issues on newer operating systems like Windows 8. The adipokines are thought to play an important role in the regulation of adiposity, metabolism and reproduction. The placenta secretes placental lactogen (PL) and adiponectin in equal amounts and in humans,

adiponectin strongly inhibits LH-stimulated progesterone secretion in human follicular fluid (FF) in vitro. The present study was designed to examine the effect of leptin (OB), an adipokine of relative high abundance in blood in all species and to study if OB can inhibit progesterone secretion in human FF.
