Photoshop Basics Managing image layers A layer is the first thing you see in a Photoshop file. Each layer can be used for a multitude of functions, such as creating a background, applying a filter or filter effect, enhancing a photo, adding a different color, recoloring, adjusting exposure, softening or sharpening an image, and so on. Each layer has its own layer properties, such as transparency, which lets you see another layer below it. To create a new layer, double-click any image layer in the Layers panel or choose Layer⇒New⇒Layer from the menu bar. With the new layer selected, click the Create New Fill or Adjustment Layer button located at the bottom of the Layers panel (see Figure 6-1), and then select a layer to add the new layer to. Select the color (or color combination) for the new layer by clicking the New Layer Fill Color or Screening Color icon (red circle with a cross in it) in the panel, shown in Figure 6-1. Make sure that the first layer isn't selected before you click the icon. If you want to add a new layer that's a duplicate of the first layer, right-click the layer and select Duplicate Layer from the shortcut menu. After you've created a new layer, it automatically appears in the Layers panel. Your image has now become a collection of separate layers, each with its own unique color. You can group or ungroup layers in the Layers panel. Grouping is useful if you want to apply the same filter to multiple layers. You can delete a layer or move it to a different folder simply by selecting it and then clicking the trash icon (X) at the bottom of the Layers panel, and by dragging it to another folder, respectively. You can then drag and drop it into another image. **Figure 6-1:** From the Layers panel, click the New Layer icon at the bottom of the panel to create a new layer. Using the Adjustment Layers feature Photoshop has a feature called Adjustment Layers that, when used, enables you to use the same effect or filter to change settings on multiple layers at once. For instance, you can use the Adjustment Layers to change the color, contrast, and exposure of all your image's layers. To use the Adjustment Layers feature, first open an image and

What's New in the?

It has been one year since Tropical Storm Andrea went through Houston, bringing heavy rains and powerful winds. Yet a great number of our lights are still out. You might be surprised to learn, but a person's home electrical panel and the electrical systems inside of your home are more vulnerable to a tropical storm than your roof is. With that in mind, I wanted to take the time to show you what your home would look like if you lose power during a tropical storm. I hope this helps you be prepared for Hurricane season. Remember, my home is a classic, three-story split-level in the Independence Heights area of Houston. You can see me live and (sometimes) behind the scenes on the Facebook page, Instagram, and Twitter. Please like our Facebook page and follow us on Twitter. If you have a story that you'd like me to cover, send me an email.
