In FUT, Tactical AI is the Artificial Intelligence of a football player. It learns to play the game in real time using all the situational awareness available to the game. Tactical AI adopts different playing styles depending on the game situation. For example, in possession situations it is usually best to attack and risk losing the ball to try to score. Out of possession it is often preferable to play more defensively to retain possession of the ball. This gives players the ability to perform their best skill-set in every situation. Tactical AI applies a bespoke and different tactic to every single player on the pitch. Every single player can have his own unique Tactical AI personality, which is influenced by

individual traits and the position he plays in the team. Players can also influence his Tactical AI through his own actions. Commenting on FIFA 22 and FIFA Ultimate Team, Electronic Arts Vice President of Marketing Partnerships Ian Sperring said: “We’re excited to introduce HyperMotion Technology to FIFA and FUT. The focus on player performance, development and personalisation has been brought to life thanks to this incredible technology. We are delivering on our promise to reward fans with FUT through an engaging experience that’s truly unique.” Andy Moore, Vice President of the EA SPORTS FIFA Team added: “As the number one digital sports entertainment property, FIFA has to be tuned and

tuned often. As we approach new experiences in gameplay, sports content and visual upgrades that deliver on the highest expectations, we are expanding our development and technology capabilities to deliver the broadest visual coverage and realism to fans through our ‘Genuine Fans First’ approach.” FIFA 22 and FUT have been available in beta form to a worldwide base of testers for the last six months. This has been a thorough testing period, where we gathered feedback and tested systems to ensure players have the best experience possible when FIFA 22 launches on 25 May. Key features and improvements in FIFA 22 and FUT include: Improved ball physics and increased accuracy Adjustments to match the laws of

physics, including increased deformation of the ball and improved handling at low speeds. Defect Ball is back and stronger than ever. Defect Ball: A free kick issued by the referee against an opponent due to a noticeable seam splitting or defect on the ball. The referee has the right to award the free kick to a team that wishes to try and recover the ball before
