The most useful of the three is "Improve detail" which can enhance the quality of picture by exposing hidden details, as well as increasing contrast. "Prepress" enhances the appearance of images by correcting the brightness and saturation, and the third is "Tone Correction" which focuses on the use of colors, contrast, and brightness. It is recommended to run the program in advance, especially if one intends to send files to a print company. Nevertheless, it can be run for final adjustments before the actual printing begins. One of the greatest strengths of the program is its graphical user interface. One can open files either by transferring them with the "Open Image" command or by clicking on the program icon in a menu. From there, one can choose what adjustments to perform.
