Q: MySQL: SELECTing an entry with multiple values in one field I have a MySQL table with multiple values in one field. I need to select all the rows where the value in the field is "SomeValue". A: You can do this with a simple IN: SELECT \* FROM table WHERE field IN ('SomeValue1', 'SomeValue2') See: A: SELECT \* FROM table WHERE myfield IN ('SomeValue', 'SomeOtherValue') How much do you need to live? Robert Frank, an author and photographer, coined the term "the best time to visit a place is when there's nothing special happening there." So what do you need to see and do in Japan to live well? It's easy to think that a good life requires expensive stuff, but it only takes a basic set of things to live well. Frank says: "It is a good life when you are outside the city limits and when you see the river and the trees." Watch over the next week as we identify what you need to get by in Japan. 1. A short break away from it all A bare-bones, three-day trip to Tokyo is enough to get you away from it all. Visiting Japan and Tokyo in the low season (when it's cold, rainy or otherwise unpleasant) is an excellent idea, as you get the kind of "beach trip" feel for less money. 2. 10,000 Yen, plus 20,000 Yen is the initial fixed cost for a single or double room in a Japanese hotel, and you don't even get to live in a fancy one. But you'll still end up with the cleanest and best rooms you've seen. 3. A passport Frank's strict "nothing special happening" rule doesn't apply to Japanese hosts, who tend to be very helpful. As a result, he has learned to make a point of introducing himself at least once at a Japan trip. If you want to have the freedom to leave or enter a country at will, you'll need a passport. In the US, most places only require you to carry your driver's license. In Japan, you need to hold your passport or visa or risk having

Explosion-proof doors and windows are necessary, in the use of toxic gases such as flammable gas, explosive gas, radioactive gas, corrosive gas, poisonous gas, high voltage conductive gas, and so on. In the past, there are a lot of explosion-proof doors or windows on the market. They are mainly categorized into the following two types: (1) the door or the window adhered to a regular door or window frame tightly so that they can not be opened once they are installed; (2) the frame only made of a high strength metal is able to tightly adhere to the door or the window. But there are some problems. The former one needs an electric arc between metal surfaces, and sometimes it is impossible to be installed because the metal surfaces are corroded and only the oily parts of them are, and then the door will be broken and the assembling cost will increase. The latter one needs a high strength frame and the cost is high. Therefore, the problem to be solved urgently is to provide an explosion-proof door with a more simple structure, lower cost, and easy installation.Q: Why does changing the indent-width in org-mode result in incorrect indentation? I just started using org-mode yesterday, and I'm having a bit of difficulty with the indentation. This is my.emacs file: (setq org-mode (use-package "org-mode" :init (add-to-list 'load-path "~/org-mode") (require 'org) (add-hook 'after-init-hook (lambda () (org-load)))))) When the file starts with lines with only white space, the file's formatting is off. For example, the following string gets double indentation, and this is what I want: \* Apple pie But if I start the file with one or two tabs, the formatting is correct: \* Apple pie I've found someone else that has this issue, and the solution was to change the indent-width. However, this causes the text to be mis-indented in some cases: \* Apple pie Why does this happen? And what is a more elegant way of indenting that doesn't rely on the indent-width? A: You
