The plugin allows you to choose different arrangements for any of the four corners, giving you total freedom to create unique mixtures of sounds. This way, while a track is being played and Forma-8 is active, you can quickly pan the cursor on the pad and instantly or slowly transform the sound. Besides the vowel and voice selections, you also get to adjust resonance and modulation for the effect. These, along with the use of the 'Mix' and 'Volume' parameters can give you an either subtle or powerful output. In closing, Forma-8 is by all means an audio plugin that can definitely give you the right amount of audio transformation you need in order to add a human like voice effect to your songs.
