What's New in the Java OnePackage?

Here is the download link for the one-package archive. You may download it from here, choose "jdk1.6.0 10.ire.jdk.panda" as destination, click "Unpack" button.

Requirements: The archive you have download contains only a one-package archive, there are no special requirements, you can just run it. Installation: Go to the one-package archive and extract "onePackage-jdk-1.6.0_10.jre.jdk.panda.rar" into C:\java\ and rename it "onePackage.bat", then double-click on it to start the installation. Use: The one-package archive, the installation steps and use instructions can be found in "readme.txt" file. Changes: This project has just been in development since last quarter, I have had some hiccups in the development, such as "onePackage-jdk-1.6.0_12.jre.jdk.panda.rar" might not work, but that's okay, you may use "onePackage.bat" directly in the archive. The one-package archive is basically for my own convenience, so I can offer you the source codes for my own convenience. I do not

recommend using this archive for commercial purpose, but you may use it for non-commercial purpose, you are welcome to change it according to your needs. Q: Will an answered question start generating upvotes if I put my name on it? Recently, I came across a fairly interesting question on Stack Overflow. For reasons I will elaborate upon in a minute, I'm not actually an active answerer on the site, so I didn't want to answer it myself (I realize this is not standard procedure, but...I'm kind of lazy about answering questions). However, the only reason I didn't answer it was because I wanted to ask one of my favorite question answerers to. I noticed the question has an accepted answer, but no upvotes. I know that's not usually a problem, but it was a bit surprising since the answerer is one of the top answerers in our community. It turns out that this is due to the fact that the question was, in fact, my question. I had written a question, and I was the author of it. What's more, I had added my name as the author to the question. So here's my question: Would the answer I just posted, assuming it's correct, start generating upvotes? If it would, then what would be the difference between this and a question answered by one of our high-profile users? Just to be clear, I'm not asking if someone with

System Requirements:

Minimum: OS: Windows 7 (64-bit) Windows 7 (64-bit) CPU: Intel Core 2 Duo 2.4 GHz or AMD Athlon XP 2800+ Intel Core 2 Duo 2.4 GHz or AMD Athlon XP 2800+ Memory: 2 GB 2 GB Free Disk Space: 2 GB 2 GB Free Disk Space: 2 GB DirectX: Version 11 or better Recommended: Windows 7 (64-bit) CPU: Intel Core 2
