I'm curious to see what new features are in store for everyone. For those of you who want to see what the future for digital image editing with the newest features of Photoshop (e.g. Photoshop 2020) will look like, here are some early concepts and the future and past of what's to come. What happened to the TIFF format? What happened to the JPEG format? What happened to RAW format? What happened to the 32bit and 64bit formats? What happened to the PSD File format? What happened to all the layers and layers of undo features that were in Photoshop? What happened to the UI? What happened to all the workflow features that were in Photoshop? What happened to the entire concept of digital imaging, and how Photoshop has changed that concept? What happened to Lightroom, if anything? What happened to the idea of the pro developer's software? What happened to the idea that Photoshop was and is an application built from the ground up for digital imaging? What happened to the idea that a professional image editor was something written by professionals for professionals? What happened to the idea that traditional digital image editing was something you did for fun? What happened to the idea that you only use a single image editor – the one you've always used – that you learned to use as a child? What happened to the idea of having a complete ecosystem for everything you need to create, edit, and enhance your digital images? What happened to the idea that Photoshop was and remains your tool? What happened to the idea that you can do everything you need to with a single Photoshop application? What happened to the idea that you need a choice of which image editing application you use?
