Also new this year is the very cool ability to fully manage groups of images and move them together in an entirely new way. The concept is not new at all (see this video tour of Photoshop CS6), but this year it is even easier to do and a much smarter way of managing several images at once. With the Plus command (at the prompt, type 1 Plus), you see a “plus” symbol that you can click with your cursor. What you select will be added to the file, and you can now move around images in the file. This is a much faster and more flexible way of working than the old way. Another very powerful feature is the ability to create a panorama , if you have a large camera setup as part of your system. With the options available, it is as simple as taking a photo — the end result is impressive. The new Invert command is another welcome addition, and gives you the ability to quickly see what the image would look like if the colors were reversed. It’s a very powerful tool for getting the most out of your favorite image collection. If Photoshop was an airport, it would be one of the busiest in the world. This software is practically essential for just about any designer, and readers would be well advised to pick up a copy to make sure my users don’t have to settle for just reading about equipment. Once you get the hang of Photoshop - which should not take more than a few beats of a tutorial - you should be on your merry way to designing and editing your next masterpiece.

Various settings available for each filter are described in the filtering menu and help to control the overall effect. Image adjustment filters open the options in the filter panel. The filters are available for converting the 16-bit color depth to 8-bit and for sharpening as well. To save the image with the new filters or changes, one can click the Image menu and choose Save for Web (PNG, JPEG, GIF, TIFF, EXR or PSD file format). One can even save the edited image as a separate JPEG or GIF file.]
