As for Lightroom, the feature list is fairly exhaustive and impressive. The best part of this release is the smooth, stable performance that I finally came across after years of testing. I also like that the developers have left the UI alone and, in some instances, enhanced it with new features. Indeed, this new version has significantly increased the speed of the import process, making it one of the best Lightroom experiences in recent memory. Navigation is also much improved thanks to a clean navigation bar and the new my libraries feature. Furthermore, the new lens correction and mask features are more interesting than they were in previous versions, though they do require further testing, since I didn't notice any major performance issues overall. Exposure compensation is also more useful and much easier to comprehend now. In the opposite sense, the new XY grid feature is downright useless, although the 2D canvas is always a welcome addition. My main issues with the new version stem from certain workflow and organization issues. I find the importing process, for example, more cumbersome in all three of my cloud memory cards, even though I've always preferred the process in older versions of Lightroom. But I still believe that the importing, overall organization and the UI improvements are worth considering. Easily use existing background information to be able to quickly remind yourself of what the image is about and more. Apply high-quality content aware retouching techniques. The latest version of Photoshop, thanks to the rapid improvements in AI, minimizes the need for human intervention and comes with much more natural-feeling photo editing.

To capitalize on the power of the web, Photoshop will also be launching with universal design enhancements, including a fully responsive, web-based interface on the web, iOS, Android, Mac and Windows platforms. New, heightened collaboration capabilities for projects continue to make it easier for Photoshop users to make changes to files that are shared in Share for Review. In addition to commenting on and reviewing each other's changes in real time, users are now able to incorporate file metadata into comments and notes. This additional file information enables Photoshop to automatically organize and follow comments across the project without requiring users to remember which files have

been changed. When sharing for review on the web, users can now automatically generate a comment with a thumbnail of the file as an additional way for all those who've made a change to keep track. This helps to streamline commenting from other Photoshop users. Furthermore, in addition to enabling users to comment on one another's edits, Adobe is bringing improved commenting support to the desktop and iOS apps. Photoshop users on the desktop can now comment on photos, slideshows and videos in their galleries directly from the toolset, while iOS users can comment directly on shared files. More than two-thirds of images and videos viewed on the web are shared by users within a collaborative environment. Adobe's new enhancements to Share for Review will now enable Photoshop users to share more than work simply on a single file. Users are now able to comment on and review all of the files in a gallery or project.
