Although the feature is easy to use, the developed interface is graphic intensive, which makes the feature slower. With the new Camera feature, users just need to drag the orange dots located on the corner of the image to rotate the image. The transformation process will then start, and the image will rotate with the chosen degree and the required target rotation angle.
- Composite: Recently the Composite feature in Photoshop has given users a chance to combine two images for aesthetic reasons. If you wish to use that feature, select two images and then choose the Combine Layers option. The combined image will be shown in a preview window, and users can apply any of their preferred settings. If they're happy to use the settings, they can click OK. A new Create & Share project overview in the Organizer is now available to show quickly how projects progress, and a feature high on mission is the release of Photoshop Join for Creative Cloud – a standalone application from the design and development team at Adobe. This application makes Photoshop all-or-nothing, allowing users to share or make edits to a project from all their devices. Adobe today announced the availability of Share for Review, also known as Adobe Frameworks, to Photoshop users. With Share for Review, photographers can collaborate online on projects with an emphasis on convenience and ease of use. Photographers can also conduct local review sessions within Photoshop with other users or by assigning edits and comments to review, all without leaving the workflow of their current project within Photoshop. This feature is available in the Photoshop Creative Cloud Desktop application today.
